

Navigating the Research Labyrinth: Preparing Winning Research Projects Using Concept Mapping

2015 ANCC National Magnet Conference®

October 8 3:45-4:45pm

Patricia O'Malley PhD, RN, CNS
Premier Health
Dayton, Ohio

Concept Map

- Diagram of relationships
 - Leads to, causes, drives
- Organizes ideas- images- words
- Structures knowledge

Why Use Concept Maps for Research?

- The initial conceptualization of a research project is the most difficult element in developing a successful research project
- How well the project is initially conceptualized is the basis for right choices for design & analysis
- Conceptualization refers to the articulation of thoughts, ideas, or hunches and the representation in objective form
- In the planning process, concept maps help the researcher conceptualize:
 - major goals & objectives, needs, resources, & capabilities
 - programs or treatments
 - samples & settings
 - measures & desired outcomes
 - strengths & weaknesses

Trochim 1989

Origin

- Developed by Joseph Novak & research team beginning in the 1960's at Cornell University
- Work based on theories of David Ausubel (1968), which stressed the importance of prior knowledge in being able to learn about new concepts
- Novak concluded that learning that matters requires integration of new knowledge and propositions into existing cognitive structures
- A concept map was defined as a graphical representation where nodes (points or vertices) represented concepts, and links (arcs or lines) represented the relationships between concepts.
- The concepts, and sometimes links, are labeled
- The links between the concepts can be one-way, two-way, or non-directional
- The concepts and links may be categorized
- The concept map may show temporal or causal relationships between concepts
- Concept maps are powerful tools for learning
- Use has expanded beyond the classroom

- <http://www.ericdigests.org/1998-1/concept.htm>

Concept Map

Novak & Cañas 2008

<http://cmap.ihmc.us/docs/theory-of-concept-maps>

- Graphical tool to organize &/or represent knowledge
- Includes concepts placed in circles or boxes
- A concept is an event or object or reality described by a label
- Relationships between concepts are indicated by connecting lines
- Words placed on a line are linking words to describe the relationship between the two concepts
- The label is most often a word(s), although symbols can be used
- Propositions are statements about the event or object either naturally occurring or constructed
- Propositions contain two or more concepts connected using linking words or phrases to form a meaningful statement
- Sometimes these are called semantic units, or units of meaning

Concept Mapping for Planning, Evaluation & Research

Rosas & Kane, 2012

Integrated mixed method approach to plan, evaluate & research

Concept mapping generates valid & reliable results

Purpose varies considerably- confirms the broad use of mapping outside education

Concept Mapping

Village & Greig et al. 2012

There is no domain of knowledge or skills for which concept maps cannot be used

Novak 1990

Concept Mapping

Rosas & Kane 2012

Why does concept mapping work?

Ausubel 1968

Concept Maps

- Drives focused thought & understanding
- Visualizes ideas
- Complements the physiology of brain work
- Helps construct knowledge

The primary benefit accrues in construction

Novak, 1990

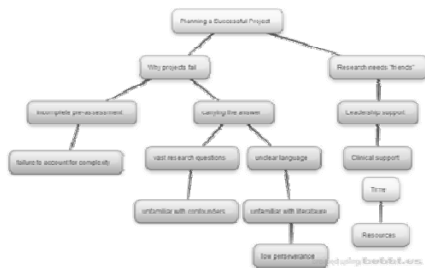

Concept Maps Stimulate Metacognition

Harrison & Gibbons 2013

Key to successful research projects

The First Discussion

The First Map

How Concept Maps Drive Successful Research

Successful Map Construction

Yeo CM 2014

Data Collection for Concept Mapping

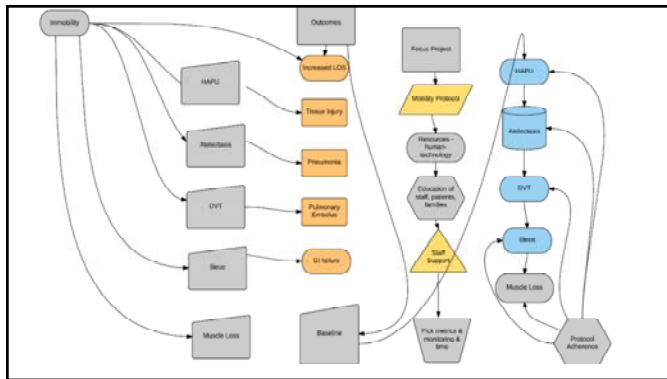

Rosas & Kane 2012

Map Construction

- Define the problem
- Define the context
- Write the questions- all of them!
- Identify the key concepts- usually 15 to 25 concepts will suffice
- Place the key concepts in the “parking lot”
- Concept maps are never finished. After a preliminary map is constructed, it is always necessary to revise this map & add concepts
- Good maps usually result from three to *many* revisions
- After a preliminary map is constructed, start cross linking
- Begin focus, limiting and choose
 - Novak & Canas 2008

Concept Map Progression

Torre, Durning, Daley, 2013

[illegible]

Group Concept Mapping

Trochim WM 1989

- Concept mapping focuses group to stay on task/track
- Relatively “quick” results reduces ambiguity
- Interpretable related to use of participant’s language
- Provides an image which simultaneously reveals ideas & interrelationships
- Can help to improve group communication, cohesiveness, morale
- Provides a structure for a successful research project

[illegible]

Creating the project
